

Release Notes

SEPTEMBER 2021

WIKI UPDATES, MIGRATION OF CLOUD SOURCES INGESTION AND NEW INTEGRATIONS

September 2021

A smaller release this time than recently, focusing on back end improvements and preparing for future feature releases.

Don't miss out on the continued integration of additional security tools, and feel free to get in touch with any additional tools you would like to integrate.

What's new? (non-UI)

Began migration of cloud sources ingestion to new infrastructure for improved performance

Introduced auto-scaling to better handle spikes in alert volume

Security and performance updates

Integrations

- New integrations of source systems:
 - ManageEngine ADPlus
 - Netwrix Auditor
- Improved existing integrations:
 - Additional threat mapping of FortiAnalyzer alerts

Wiki

- New tutorial article on interpreting the cluster Visualisation
- Improved navigation and links throughout the wiki

Get involved

As ever, we're excited to continue to develop SOC.OS to meet your needs, and always welcome your input. Please continue to call us or email support@socos.io about defects and improvement suggestions, no matter how small or seemingly left field!
